

Our company philosophy has always been centered in sustainable processes and dedication to environmental health. Today, these same values reside in all our business practices and pervade the organization. We recycle over two million pounds of post consumer bottle glass each year in our manufacturing. Along with many other initiatives that continually improve our sustainability efforts, we implemented a co-processing partnership to almost completely eliminate any of our manufacturing waste from going to a landfill. As is evident in our product design and company values, we are committed to ongoing process advancements and environmental stewardship.

\*Pre-consumer materials are generated during our manufacturing process and may consist of scrap and trimmings that were never used in the consumer market.  
 \*\*Post-Industrial Material from manufacturing processes where virgin resources would otherwise go to waste. This material is collected and used in a product other than that for which it was originally used.  
 \*\*\*Post-consumer material is an end product that has completed its life cycle as a consumer item and would otherwise have been disposed of as a solid waste. Oceanside Glasstile's post-consumer material is recycled bottle glass (cullet) from curbside recycling programs.
